

## Assignment 1.9: Community Mapping

### Instructions:

Each group of three will draw a community map. It is best to do it on large flip chart paper using markers. Draw and label the map by hand, based on your own observations, not using online maps.

In your map, draw the route between the campus and home and identify all of the workplaces you observe on your route. This includes businesses, government buildings, community organizations, public services, etc. If the route is quite long, decide on a neighborhood to focus on.

I chose three workplaces which are on my route and are 3 different types: between a private construction company and a government building and a professional office.
